ABSTRACT OF FRIENSHIP WEBSITE

WEB DEVELOPMENT PRESENTATION

<u>Title:</u>   FRIENSHIP WEBSITE

<u>Focus:</u>

To promote user's interest in various activity like business and in career development.

<u>Abstract:</u>

This thesis project consists of the development of a contributory web application to display and gather information on Resource and Marketing. It is a social media where users can engage their self and involve in the activities like business, stock market etc. The goal of this application is to create the foundation for a web-based spatial inventory of existing. It allows the user to chat and share their thought with their fellow mates. The User can able to watch the feed related to their professions and they are allowed to ask any doubt regarding their career development via queries. Also as part of its purpose, the application seeks to engage the general public, including interested professionals and scholars, by incorporating the ability to contribute information through the correction and enhancement of current entries. The web application will incorporate the minimum data standards for inventory of websites. As a secondary purpose, the web application was developed to be replicable by others who might choose to take and adapt the web application model. In order to use many of these services together, the web application was purpose-built using the standard HTML, CSS, and JavaScript programming languages. Mostly the user can login by signing in using mobile number or by their email id. As the start of project this website was planned to made also as an application but, due to the less proficiency of user led this plan to be failure. This website is to be furtherly enhanced some new categories and features in future. Some features are to enable video and audio chats. The main motto of this website is to provide service to users and to guide them to the path of light.
